

Wood SPECIES

OAK

One of the most common domestic hardwoods available. It's light brown to slightly reddish color is extremely versatile and receptive to a variety of stains and finishes. The dense, durable wood contains a uniform grain and retains its natural characteristics very well.

POPLAR

Naturally the species has a light yellow brown color with variations of green tints. Exposure to light tends to darken the green colors to brown. The typically straight and even grain is easily stained or painted due to its smooth surface.

CHERRY

This impressive hardwood has a rich reddish brown tone that can range from light to dark, and complemented by a straight, fine grain that can contain pith flecks and "beauty marks". Cherry can be beautifully finished and over time the species tends to darken giving off a rich, warm color.

SOFT MAPLE

The growth rings found on soft maple are less distinct and lighter in color. The sapwood is typically grayish white in color with variations of darker reddish brown. With a fine texture and close grain it has an ample surface for staining and finishing.

ASH

Ash wood typically consists of a very uniform and consistent grain. It is pale white in color, with brownish red strands throughout. When stained the coarse grain is still evident. Ash is extremely dense and durable and withstands the elements well.

HICKORY

Noted for its hardness, durability, and strength. With an unpredictable grain that can appear straight or sometimes wavy, hickory can come in a range of colors from blond to deep reddish brown. The dramatic character of the species is increased by random knots and mineral streaks throughout.

KNOTTY ALDER

Typically light brown with red and peach color variations; Knotty Alder is most identifiable by the open, solid knots of various size, color, and shape. The distinct characteristics of Knotty Alder can also be enhanced by stain or finish.

AFRICAN MAHOGANY

An exotic wood with a light to deep reddish brown color is extremely durable and rot resistant. The grain is typically ribbon like, but may also be straight with an even, medium to coarse texture. This unique wood can also have a shimmering finish.

SPECIALTY

Liberty Doors is proud to accommodate a wide variety of wood selections. If the selection of your choice is not listed, please contact your Teem Wholesale representative for more options.

RUSTIC

Select species are available in rustic grade. This may include a wide variety of dark and light wood colors, structurally sound knots, small crack and/or checks. Varying mineral streaks, pith marks, and staining all may occur when choosing a rustic grade material.
